

# Programme Specification

## BENG-MC-2022: Engineering (Mechanical Engineering)

---

LU Bachelor of Engineering with Honours awarded by Lancaster University (FHEQ Level 6)

Programme Status: Draft | Version: 2

## Introduction

This programme specification provides a summary of the main features of the Engineering (Mechanical Engineering) programme and includes the learning outcomes that you as a student are expected to have achieved on successful completion of the programme.

Further detailed information related to this programme and the College can be found in the following resources:

- Programme Handbook
- B&FC Admissions Policy
- Work based and placement learning handbook (for foundation degrees)
- Student guide to assessment and feedback

When undertaken as part of a Degree Apprenticeship additional information is available in the following resources:

- The Programme Delivery Plan
- The End Point Assessment Guide
- B&FC Mentor Guide
- B&FC Apprenticeship Strategy

## Key Programme Information

<b>Programme Code</b>	BENG-MC-2022
<b>Programme Title</b>	Engineering (Mechanical Engineering)
<b>Teaching Institution</b>	Blackpool and The Fylde College
<b>Professional, Statutory and Regulatory Body (PSRB) Accreditation</b>	None
<b>UCAS Code</b>	
<b>Language of Study</b>	English
<b>Version</b>	2
<b>Approval Status</b>	Draft
<b>Approval Date</b>	Not yet approved
<b>JACS Code</b>	Other: Other
<b>Programme Leader</b>	Karen Whiteside

## Programme Awards

<b>Award</b>	<b>Award Type</b>	<b>Level</b>	<b>Awarding Body</b>
LU Bachelor of Engineering with Honours	Honours Degree (360 credits)	Level 6	Lancaster University

## Programme Overview

Mechanical Engineering is one of the oldest and broadest disciplines in the engineering field. Its grounding principles go centuries back in time and were the main factors for the Industrial Revolution, and the contemporary development of technology. Mechanical engineers apply physics, engineering and science to design, research, analyse, develop, manufacture, test and maintain mechanical systems, from the smallest to the largest ones. This includes providing solutions to the development of miniature systems of moving parts to providing component designs for extremely large machinery, vehicles, factory production lines and many others. Our BEng (Hons) Mechanical Engineering programme will provide you with core and specialist principles to boost your employability potential within the field. You will have the opportunity to follow a Mechanical pathway, after you have sampled core engineering subjects. Core subjects

will be extremely valuable to you as a mechanical engineer, as they will lay the foundation for the specialist subjects that you will be studying. Among these are engineering design, mathematics and methods for managing engineering projects. Later in the programme, as you develop your knowledge and skills, you will be able to explore specialist topics that will present you with opportunities to explore software and practical subject areas such as design, control & simulation and computational fluid dynamics. You will benefit from a blend of practical and theoretical experiences. In addition to these, you will have opportunities to develop soft skills. Particularly important will be nurturing your creative ability and building your organizational skills and time planning, getting organized to work under the pressure of deadlines. In addition to these, our programme will aim to teach you how to apply your technical and scientific knowledge to concrete, practical problems, and we will get you involved in various activities to develop your profile and ideas. What you will take away after graduation is a set of experiences that will help you in your future career in Mechanical Engineering.

## Admission Criteria

A minimum of 48 UCAS points (excluding Functional Skills) in an appropriate discipline:

- DD from A levels to include mathematics and a technology, engineering or science-based subject
- PPP from Extended Diploma, MP from Diploma, MM from 90 Credit Diploma in a science or technology-based subject, including passes in mathematics
- Obtain an overall Pass including a B in the core of the T Level and a Distinction in the Occupational Specialism. Subjects accepted: Maintenance, Installation and Repair for Engineering and Manufacturing, Engineering, Manufacturing, Processing and Control and Design and Development for Engineering and Manufacturing.

### The entry criteria for direct entry onto Level 5 of the programme are:

- HNC or HND with an overall Merit grade in Mechanical, General or Aeronautical Engineering or another appropriate Engineering discipline
- Applicants for whom English is not their first language are expected to achieve a minimum 6.0 overall with at least 5.5 in each IELTS component.
- Applicants who are able to demonstrate relevant work/life skills or knowledge will also be considered on an individual basis and will be required to attend an interview and provide an up-to-date CV with a professional portfolio, evidencing their capacity to undertake the programme.

Students entering the programme with an HND will need to obtain additional initial advice and guidance on their funding eligibility.

## Career Options and Progression Opportunities

You will take a range of common core modules at Level 4 along with all our BEng students. They will give you the necessary foundational knowledge. At Level 5, you will follow the Mechanical Engineering pathway with a series of specialist modules. Below, you will find an overview of what you need to know if you are considering Mechanical Engineering. Mechanical engineers are versatile, adaptable employees. You can go into a very wide range of sectors among which are construction, energy and power, transport, manufacturing, aerospace, automotive, and even fields such as chemical or pharmaceutical and biomedical. You will be employable in a range of positions involving the management of projects or people, or resources. You will also be able to work in the development of new technologies, systems and materials.

After graduation your options will vary significantly, depending on what you would like to do. You might choose to go into research and further study. You will, however, be immediately employable upon graduation and will be able to work across all sectors. Mechanical Engineering nowadays is in rapid growth. This opens opportunities for developing top-notch technologies like designing and developing medical products (mechanical body parts) or optimizing production lines and processes in large factories and refineries. As a mechanical engineer, your day might include office work with regular visits to plants, factories and workshops. You might also work at building sites. Work will include developing, and evaluating theoretical designs, putting them into concrete shape and testing performance. You will have to consider implications of cost, safety and time constraints to products and processes, and you will be striving to implement cost-effective, sustainable solutions to problems. Safety will be of great importance in your work. You will probably travel frequently and gain solid experience in a few years. You will most certainly have international opportunities at some point in your career. If you become a member of the IET and/or IMechE, you might also have professional growth there and get involved in contributing to the engineering community at large. For women in particular, Women's Engineering Society (WES) also provides a network for various initiatives. Salaries for your mechanical engineers are in the upper range and at a senior level vary considerably. With experience and if you engage in regular professional development you may expect excellent progression opportunities with salaries of £45,000 to over £60,000. These will vary from one company to another and across sectors.

## Programme Aims

- To provide a robust foundation and framework for mechanical engineers enriched by the development of core, interdisciplinary and specialist knowledge of mechanical systems and technologies, their design, development, manufacture and through-life management and support.
- To enable students to independently gain skills, knowledge and confidence in applying proven principles, technological techniques and methods in mechanical engineering, leading them to explore and utilise new developments in the field, including research and advanced technologies, to acquire new knowledge, analyse and evaluate new developments in the sector and to apply these appropriately.
- To provide students with the opportunity to gain transferrable knowledge and skills that enable them to engage fully in design, research, development, manufacture, testing and maintenance of mechanical solutions, products and systems that have an impact on the advancement of science and technology.
- To provide academic, technical and professional development through a variety of learning experiences, the development of communication skills and capability of critical analysis, problem solving, the presentation and justification of rational argument and alternative courses of action.
- To enable students to critically evaluate concepts and evidence from a range of sources, and to transfer and apply creativity and innovation skills, exercising significant judgement in a range of situations, accepting responsibility and accountability for determining and achieving personal and team outcomes.
- To educate proficient mechanical engineers about responsibility, professional development and lifelong learning, and facilitate opportunities to pursue employment or the level of study which will enable them to continue to excel in their professional lives.
- To graduate professional mechanical engineers who have a critical and informed awareness of contemporary issues, legislation, human factors, ecological, sustainability, obsolescence, maintainability challenges, as well as key opportunities of the sector, recognising the impact of customer voice, market trends and industry demands, and who are able to produce or propose sustainable solutions with lasting, impactful outcomes for the success of the industry.

## Programme Learning Outcomes

## Level 6

Upon successful completion of this level, students will be able to:

1. Critically analyse and evaluate complex systems and their interdependencies through the application of systems thinking via analysis of the wider engineering context in view of integrated solutions adopting a systems approach.
2. Interrogate and resolve problems using a sound evidence base to contribute to improved effectiveness of mechanical technologies, systems, services, and their management, considering legal and contractual issues.
3. Independently analyse essential facts, concepts, and fundamentals of mechanical engineering, underpinned by scientific and mathematical principles to identify, formulate and solve mechanical engineering problems and to critically evaluate these solutions.
4. Critically analyse, test and evaluate mechanical systems and processes to identify possible problems, inefficiencies or other issues that may impact users or service providers, evaluating engineering decisions for a more socially inclusive, ethical, economically stable, environmentally sustainable and commercially viable world.
5. Use advanced mechanical engineering-specific IT facilities, applying information retrieval, mathematical and statistical methods to plan, develop and work on projects which support extended enquiries into innovative and creative problem solving in the sphere of mechanical engineering.
6. Evaluate business, customer and user needs to independently plan, manage and execute a technically and theoretically informed project, which extensively analyses all aspects of a problem and proposes adequate solutions, broadly deepens knowledge and skills base and critically evaluates expected outcomes.
7. Work in teams, managing tasks and resources to meet changing technical and managerial needs, to support design and development processes through cost evaluation, risk management, and to lead continuous quality improvement utilising robust communication strategies.
8. Use interpersonal and collaboration skills to communicate technical and non-technical information to various audiences on solutions that develop innovative ideas and new ways of thinking to support the advancement of mechanical engineering practices and knowledge.
9. Formulate innovative solutions, designs, products and services by utilising and applying industry-standard engineering skills through laboratory and workshop activities for designing, analysing, implementing, testing and controlling.
10. Creatively apply, utilise and adapt engineering principles and tools, quantitative science and knowledge towards interdisciplinary projects or to deal with uncertainty and extend technological capability and knowledge base through new applications and techniques.
11. Use general IT facilities and information retrieval skills to plan, develop and execute projects, working as a team on projects that involve technical uncertainty, strive for continuous improvement, and develop the ability to work in different roles.
12. Engage in lifelong learning and continuous professional development while supporting others in their endeavours by developing mentorship and people management skills.
13. Apply health and safety, ethical and sustainability principles, legal frameworks and technical standards to professional practices in an engineering context which recognises obligations to society, the profession and the environment.
14. Apply mechanical engineering principles, knowledge and skills in an engineering context in view of creating adaptive, sustainable and efficient solutions that correspond to given specifications.

## Programme Structure

Module	Level	Credits	%	Category	Description	Length/Word Count	Grading Method
<b>Stage 1</b>							
B4SCBENG-A: Professional and Academic Skills in STEM (Mandatory)	4	20	60%	Coursework: Essay	n/a	2000	Letter Grade
			40%	Practical: Presentation	(15 minutes)	15	Letter Grade
BENG401: Engineering Mathematics (Mandatory)	4	15	60%	Coursework: Assignment	n/a	2000	Letter Grade
			40%	Written Exam: Formal Written Examination	n/a	150	Letter Grade
BENG403: Engineering Design (Mandatory)	4	15	100%	Coursework: Other	Engineering Product Report and Presentation	4000	Letter Grade
BENG404: Managing Professional Engineering Project (Mandatory)	4	15	90%	Coursework: Project	The project will contain a portfolio of project management documents and a project closure report.	3000	Letter Grade
			10%	Practical: Presentation	n/a	10	Letter Grade
BENG406: Workshop (Mandatory)	4	10	25%	Practical: Practical Skills Assessment	n/a	1400	Letter Grade
			25%	Practical: Practical Skills Assessment	n/a	10	Letter Grade
			25%	Practical: Practical Skills Assessment	n/a	1400	Letter Grade
			25%	Practical: Practical Skills Assessment	n/a	10	Letter Grade
BENG409: Fundamentals of Thermodynamics and Heat Engines (Mandatory)	4	15	70%	Coursework: Report	Technical / Laboratory Report	2500	Letter Grade
			30%	Written Exam: Formal Written Examination	n/a	120	Letter Grade
BENG423: Mechanical Principles (Mandatory)	4	15	50%	Coursework: Assignment	Engineering Report with Mathematical Calculations	2000	Letter Grade
			50%	Coursework: Assignment	Engineering Report with Mathematical Calculations	2000	Letter Grade
BENG424: Fluid Mechanics (Mandatory)	4	15	50%	Coursework: Other	Report and Engineering Calculations	2000	Letter Grade
			50%	Coursework: Other	Report and Engineering Calculations	2000	Letter Grade

Stage 2							
BENG501: Research Project (Mandatory)	5	20	90%	Coursework: Literature Review	n/a	3000	Letter Grade
			10%	Practical: Presentation	n/a	20	Letter Grade
BENG502: Professional Engineering Management (Mandatory)	5	20	100%	Coursework: Portfolio / e-Portfolio	n/a	4000	Letter Grade
BENG503: Further Engineering Mathematics (Mandatory)	5	20	50%	Coursework: Assignment	Applied Mathematical Study	1600	Percentage Grade
			50%	Written Exam: Formal Written Examination	n/a	120	Percentage Grade
BENG504: Advanced Mechanical Principles (Mandatory)	5	20	60%	Coursework: Report	n/a	2000	Letter Grade
			40%	Written Exam: Formal Written Examination	n/a	120	Percentage Grade
BENG506: Propulsion (Mandatory)	5	20	70%	Coursework: Research Portfolio	A research portfolio that demonstrates your understanding and reflection on principles and operations of propulsion systems.	3000	Letter Grade
			30%	Written Exam: Formal Written Examination	An exam to demonstrate knowledge of the application of mechanical and thermodynamic principles to propulsion systems.	120	Percentage Grade
BENG516: Materials, Properties and Testing (Mandatory)	5	20	50%	Coursework: Assignment	Laboratory Report	1500	Letter Grade
			50%	Coursework: Other	Presentation of CFD Simulations and FEA	20	Letter Grade
Stage 3							
BENG601: Major Project (Mandatory)	6	40	5%	Coursework: Other	Proposal	1500	Letter Grade
			80%	Coursework: Report	n/a	10000	Letter Grade
			15%	Practical: Presentation	n/a	20	Letter Grade
BENG603: Control and Simulation (Mandatory)	6	20	40%	Coursework: Report	Technical / Laboratory Report	1600	Letter Grade
			60%	Written Exam: Formal Written Examination	Formal Written Examination	120	Percentage Grade

BENG608: Manufacturing Systems Engineering (Mandatory)	6	20	40%	Coursework: Project	Personal written technical report, incorporating a reflective account, literature research and theoretical applications in practice.	1500	Letter Grade
			60%	Practical: Practical Skills Assessment	Manufacturing simulation project with Digital Components and/or another manufacturing simulation software of your choice.	2500	Letter Grade
BENG611: Thermofluids (Mandatory)	6	20	60%	Coursework: Report	Technical / Laboratory Report	2000	Letter Grade
			40%	Written Exam: Formal Written Examination	n/a	120	Percentage Grade
BENG612: Virtual Engineering (Mandatory)	6	20	50%	Practical: Other	Presentation of CFD Simulations and FEA	20	Letter Grade
			50%	Coursework: Research Portfolio	n/a	1500	Letter Grade

## Study Workload

This degree is equivalent to 360 credits and the award you will obtain is a Lancaster University Bachelor of Engineering with Honours. This programme requires commitment to attend lectures and workshops at Bispham Campus in line with your study timetable. It is a requirement of the programme that you also undertake appropriate independent study and further reading and assessment.

The programme is offered on a full time basis which will typically require attendance on campus for two full days per week over three years. A part time pathway can be followed from Level 5 onwards, which would typically require attendance on campus one full (long) day per week over 3 years. As well as attendance to lectures, you are expected to undertake sufficient self-directed study. For each hour of class contact, you can typically expect to undertake an additional 2-3 hours of work, however this is dependent upon individual progress. You will need to find the right number of hours based on your own needs. Our tutors can help you with advice and support.

On the full-time programme of study, at Level 4, you should expect to be in College between two and three days weekly. At Levels 5 and 6, the time spent at College is two days weekly. Your time will be divided between practical workshops, labs and lectures. You should plan for a minimum of one additional hour of independent study for each module you have in any semester. It is commonly accepted that 1/3 of your studies is tutor-led in classes, laboratories and workshops, while 2/3 of your studies should be based on independent, self-guided work. One the part-time programme of study, at Levels 5 and 6, you should expect to be in College on a day release if you are in employment with industry. While you may be at work during the rest of the week, it is important to allocate some time for independent study.

### Teaching Methods

The course will be delivered using a range of methods, which may include informal lectures, tutor-led whole group discussions, student presentations, technical workshops, computer laboratory activities, group work, group and individual research and seminars. Some lecturers will use flipped classroom techniques to encourage your intellectual independence. Some tutors will hold their lectures in a blended approach, giving you flexibility to choose your medium of study. You will have access to strong online as well as on-site support throughout your studies.

### Balanced Theory and Practice

Modules are designed to integrate practical and theoretical application. Software and laboratory equipment will be regularly introduced by tutors and applied at relevant points within your studies. When appropriate, field trips to businesses, manufacturing facilities and other industry-specific locations will enable you to see the daily work of mechanical engineers and to think of new ways to adapt your engineering knowledge and skills to a variety of sectors. You will have the opportunity to work with case studies and practical tasks. Engaging with companies, the business world and the industry is vital for engineers and that is why you will usually work on real-life examples of the challenges mechanical engineers face in their workplace. You will have access to outstanding specialist facilities and equipment including our Advanced Technology Centre and our new laboratories. This will allow you to work with industry-standard equipment and software relevant to your future engineering career.

### One-on-one Support

Tutors are very accessible and supportive and eager to enhance your learning experience through one-on-one assistance when needed. You will also have a dedicated progress tutor along with support from the College higher education learning mentors. You will significantly benefit from relatively small class sizes and a warm and friendly learning environment which encourages effective group interaction. For your major project, you will have a dedicated supervisor in addition to your module tutor who will provide you with supportive one-on-one discussions and will have weekly meetings with you. You will be shown various knowledge-based items, tools and techniques and will be able to practice with them where appropriate to reinforce the taught portion of some sessions. Independent research will allow development of additional tools and techniques as appropriate to your chosen specialism. This becomes more important as you progress through the programme.

### Independent Learning

All higher education programmes are designed so that you are able to progressively develop independent learning skills and aptitudes. Learning independently is a key skill of all graduates when they enter the work place and one which we aim to develop further during your time with us. As you begin your programme you will be more intensively supported to develop the skills of learning and learning how to learn. As you progress you will be given the opportunity to apply these skills and to manage your own study time and activities with the goal of becoming a truly independent learner ready to get the most out of graduate employment opportunities. Your Personal Development planning activities are a key component in developing these independent learning skills and your tutors, support mentors and peers can help you to organise and structure this aspect of your learning and development.

## Programme Delivery: Assessment

Various modes of assessment will be used in different modules to ensure all aspects of learning are assessed and that you are competent in different forms of demonstrating your knowledge. These will range from real world case studies, live presentations and briefing sessions, written assessments, design projects and written examinations. You will be supported in the preparation for assessments via readily available tutorial sessions and tutor support. Some assessments may already be very familiar, such as essays, exams, and reports. However, in higher education there are a great many varieties of assessment depending on the subject, the level and the type of course. Our higher education courses often integrate academic and work-based learning so assessment may include aspects of personal reflection, portfolio building and case studies.

The assessments for this programme are based on a combination of coursework, exams and practical assignments.

### Coursework

Coursework might range from written tasks (essays, reports, reflective research) and assignments to the collation of portfolio of evidence based around a work placement or a set of laboratory tasks. Coursework differs from exams in that it will usually have a submission deadline within several weeks, and will be carried out independently.

### Exam

Exams are formal, timed assessments, carried out in a controlled environment and overseen by one or more invigilators. They assess your grasp of the theory and underpinning knowledge related to your chosen career area. The opposite of practicals, they require you to present your practical understanding within an academic context. Some modules have no exams, but most modules incorporating elements of mathematical analysis will have an exam.

### Practical

Practical assessments test your technical ability, and assess the level of application to real or contextualised tasks in your chosen career area. They can be timed or non-timed and involve observation of your practical skills and competencies, either in a work-based environment or a dedicated laboratory setting that closely resembles the workplace. Practical work-based assessments are supported and carried out by a trained assessors. Practicals may include presentations or demonstrations of prototypes you have developed.

## Programme Delivery: Work Based and Placement Learning

The programme has been designed to align carefully with the needs of industry.

Although an industry placement is not an integral part of the course, you are strongly encouraged to gain industry experience via summer internships, short courses in industry and industrial visits. We regularly invite guest speakers, employers and alumni at relevant points throughout your studies to integrate your academic and work based experience.

Case studies from industry will be embedded within specific modules and will feature throughout the course, as will the development of those attitudes and behaviours expected of a professional engineer. Students who are in work placement or in employment with industry will be encouraged to contextualise their coursework to their engineering activities to strengthen their understanding of theory within a practical context.

Throughout your study with us you may be invited or encouraged to participate in field trips, activities and events or professional development opportunities, research events and webinars supported by the IET or the IMechE. These opportunities will help you to develop a well-rounded employability profile within engineering.

## Programme Delivery: Graduate Skill Development

The BEng (Hons) Engineering (Mechanical Engineering) programme offers you the opportunity to experience and develop a range of skills related to the discipline. These include accessing and evaluating information from a range of technical sources and communicating findings in a range of ways suitable to engineering. Teaching, learning and assessment methods allow development of key transferable skills such as problem solving, ethics and globalization through communication and digital literacy. The production of assessment work in varied formats such as engineering reports, essays, oral presentations and discussions will contextualize the communication and cognitive requirements of modern employable engineers. Modules are designed to develop your existing skills to enable you to become an independent engineer, providing the basis for a successful career in engineering, developed through industry and academic research and enquiry. Further skills in technical information analysis and application will be developed during the delivery of the programme content through lectures, guest speakers and research into engineering systems, sub-systems and approaches.

The following strands linked to graduate outcomes have been identified for the programme:

- Collaborative teamwork and leadership skills: Introduction to Academic Study and Managing a Professional Engineering Project are the two modules that will require you to build solid teamwork and leadership skills. Collaborative projects and assignments will help you enhance and practice this skill set. You will use these skills throughout your studies and across all other modules.
- Communication, information and digital literacies: Managing a Professional Engineering Project, Engineering Design as well as project and Introduction to Academic Study work will enhance your presentation and communication skills. You will learn to gather and analyse data, and decide which information is relevant and how to use it, and present it effectively and professionally. Will learn more about stakeholders and how to change your communication strategies based on their needs and requirements.
- Personal and intellectual autonomy: Throughout your studies, you will have to learn to become increasingly independent and self-reliant while continuing to participate in group and teamwork. Engineering Mathematics and Engineering Design specifically require a considerable amount of individual work. It is imperative that you gain autonomy at Level 4 so as to be able to cope with work on Level 5.
- Ethical, social and professional understanding: With the module Professional Engineering Management, you will gain a considerable amount of professional skill and understanding and will begin to apply engineering principles to various engineering problems. These will include

issues that may have ethical, social, community impacts and you will need to consider these in your work.

- Global citizenship: the modules at Level 5 all consider issues of global importance and the examples that you will cover in specialist modules will usually related to issues such as sustainability, innovation, finding suitable solutions to problems arising from an increasingly global society.

- Enterprise and entrepreneurial awareness and capabilities: Professional Engineering Management and Research Project are modules that will greatly expand your entrepreneurial awareness and options in this field. Backed up by the specialist modules at this level, you will get insights into the various options individual or team enterprises have and how you can innovate and create.

- Research, scholarship and enquiry skills: You will be applying all other skills and attributes acquired at Level 4 and 5 to the Major Project module which will build your research, scholarship and enquiry skills to produce an original piece of research on a topic of interest to your field. You will also use them across all specialist modules at this level.

- A commitment to lifelong learning and career development: From Level 4 study onwards, personal development plans (PDP's) will be driven through a tutorial system and will focus on identifying the skills and attributes of graduate engineers as employees, with the formulation and setting of action plans to achieve them. At Level 6 you will already be familiar with the many options Electrical and Electronic Engineering presents and you will be expected to have an awareness of the professional development path you would like to pursue. Your tutors will help you with advice. All modules will allow you to expand your professional skills and knowledge and will help you pick a direction for lifelong learning and development. There is a strong emphasis on employability and enhancement of graduate skills in all years of the BEng programmes.

### **Study Costs: Equipment Requirements**

At College, you will have access to all the necessary software and hardware, library and scholarly works that you will need to complete your assignments. However, it is a good idea to invest in a computer or laptop for your studies as well as in a scientific calculator.

### **Study Costs: Additional Costs**

You may encounter some additional costs during your studies, which could include non-mandatory field trips. It is recommended to obtain a student membership with the IET (non-mandatory), which is £20.00 for a year and £50.00 for the duration of the entire course, and which will give you access to a number of events and opportunities for your continuous professional development.
